

## ROARY TUBBS

*Seek continued opportunities to create dynamic, next generation websites and applications.*

### Technical Skills/Proficiencies

Extensive web design skills in all facets of design and development. From concept to final product, I have mastered the tools, techniques, and methodologies of professional web page creation over my 7 years of professional experience. I create lush and engaging UI front ends using expert-level Photoshop, Flash, and Dreamweaver. I use modern design techniques with the appropriate theme in mind. I implement CSS, HTML / XHTML, DHTML, AJAX, ActionScript, JQuery, and JavaScript in my front end designs to increase performance, reliability, and maintenance. I provide functionality to sites using programming languages and tools based on various infrastructures and existing requisites. I implement business layers and data tiers using Object Oriented design patterns. I am proficient in ASP.Net as well as PHP, as well as VB.Net windows programming, and Web Services. Database skills in SQL Server 2008, LINQ and MySql, from creating and designing tables, stored procedures, and optimizing queries. I am very self-driven and a student of emerging web technologies. I constantly explore new tools as they are released and integrate proven technologies into my arsenal. I have developed countless sites through the entire life cycle. I am very motivated and work extremely well alone with no supervision, and am very personable and fit in well in team environments as well. I have great communication skills, a keen eye for design and improving the interactions between users and software, and understand software methodologies. I am very goal oriented and strive to exceed expectations.

### Experience

**November 09 - Present**

**5 Star Fulfillment**

**Oklahoma City, OK**

- Designer/Developer

While I worked at this contract position I was in charge of manipulating and designing new fresh graphical interfaces. Along with logos, product labels, product boxes, brochures and print marketing for new and re-branded products. I would create one page online advertisement websites for clients to learn more and purchase these products. These sites tied into our sales management system that is a large all in one application with point of sale, bill processing, payment gateways, online orders/tracking, dialer for telemarketing, and much more. This application was written in C#, ASP.NET 3.5 with a Linq to SQL ran as that database. I was introduced to C# while working with this application. My role was to make the existing application's UI more dynamic with the ability to have complete control. I was instructed to go through every single page of the SMS application and clean up code along with making performance enhancing modifications for the backend as well as the end user. The last month working here I was involved in incorporating a new store front feature. This feature allowed the user to create a completely dynamic ecommerce store using their current inventory already in the system, or the ability to simply use the store front as a standalone application.

**December 08 - May 09 (bankruptcy)**

**TryNoStrings**

**Oklahoma City, OK**

- Developer/Designer

No Strings was an online dating company that takes new age technology and implements advanced tools to give the users the ability to interact with other users. I was brought on to take the reins of the current PHP/MySQL developer to re design and introduce new features, tools, and an overall more user friendly experience. As well as to start migrating the website into .NET framework using VB.NET/ASP.NET 3.5 and MS SQL. I worked with other contracted developers to implement a video speed dating application that enabled users to have five minute video speed dating sessions, SMS messaging capabilities, video daily personals, and a complex dynamic matching system all driven by object oriented programming on an nTier design. My day to day tasks ranged from creating minuet desktop applications to implementing to new features, testing, and planning future applications, working with others to discuss new ideas, goals, and needs for future and current applications.

**March 08 - November 08**

**MedEncentive**

**Oklahoma City, OK**

- Developer

MedEncentive is a medical billing and insurance company. During my tenure, I Implemented a large scale task management system providing the ability to update, confirm, notify, add system details to inform the system users. Using Object Oriented Programming worked on a large scale technically challenging medical insurance system. Created stored procedures to manipulate data, custom web services that allowed the interaction between Doctors and Patients and the ability to capture doctor visits, claims, and prescribed content. Created new staff featured tools that provided the ability to add/edit documented information, import/export claim data, confirm claims, and manage pending claims. Designed new master pages for the staff area. Created custom controls to test the users browser capabilities. Work was done using Visual Studio vb.net 2005 and MS SQL Server 2005.

**Present**

- Web Designer/ Developer

**RT Designs**

**Oklahoma City, OK**

The following sites were designed, developed, and implemented personally as an Independent contractor. The tools sets that I used were Photoshop, Flash, Dreamweaver, After Effects, Illustrator, Visual Studio, MS SQL Server. The languages that were used PHP, My SQL, XML, VB.NET, LINQ, MS SQL, Action Script 2.0, XHTML, JavaScript, Ajax, JQuery, and CSS. All of the sites are live and display my design skills.
